

Livello is building the future of autonomous retail and smart inventory management. We are developing a revolutionary IoT Platform and telemetric Smart-Kiosks with shelving and monitoring technology, leveraging newest concepts and engineering principles like automation, autoscaling, resilience, real time monitoring, sensor fusion, computer vision, machine learning and deep analytics. Our stack consists of modern Javascript, Typescript, Node.Js, React & Redux, Docker, containers, client libraries, GraphQL, all built on a microservice-based kubernetes architecture, supported by the Google Cloud Platform. We strongly believe in the power of CI/CD and integrate and deploy our applications with modern tools from Gitlab.

To strengthen our team in Düsseldorf (Kirchplatz), we are looking for a

Fullstack Javascript React Node.js Typescript Software Intern

experienced Javascript developers (backend and frontend) to support us in the agile development of our our web, mobile and cloud applications, build efficient and scalable solutions.

What we offer

- A responsible position in a fast growing and highly innovative start-up
- Young, agile and diverse team with colleagues from all over the world
- Open work environment with flat hierarchies and short decision-making paths
- Cool office in a prime location with lots of shopping/restaurant options nearby
- Advanced technology stack leveraging newest IoT hardware and software
- Plenty of creative freedom for own ideas, projects and personal development
- Free coffee, water, food, fruits and snacks

Requirements (at least 3 of these)

- Experience with JavaScript: React, GraphQL, Node.JS, Nest.js, TypeScript

- Experience with state management solutions (Redux, -Saga)
- Experience with React Native and Expo.io
- Experience with test and deployment automations like: gitlab, fastlane, jest,
- Experience with Microservices, cloud service management, Kubernetes and Docker on GCP
- Experienced with message brokers like AMQP or MQTT
- Experience with online payment gateways (Adyen / Stripe)
- Experience with Google Cloud Platform serverless architectures
- Experience with authentication services for M2M and user authentication
- Understanding of IoT device management and message exchange.

Tasks (depending on your skillset)

- Frontend or backend development of our mission control, user, replenisher, tablet- and web apps.
- Build React Native applications and SDKs for both iOS and Android, either from the ground up or on top of existing software
- Architecture and development of modern software-based applications in the back-end based on Typescript and Nest.JS
- Technological conception, design and implementation of new features
- Quality assurance of the software through planning, creation and execution of tests
- Work with a cross-functional team to define, build, test, and deploy universal applications
- Version control with Git is part of your daily work and continuous integration
